Movie Night with the Dean

Henrietta Lacks is considered one of the most important people in the scientific world, yet she remains widely unknown. Her cells - “HeLa” - were used to create the first immortal human cell line, contributing to major medical breakthroughs, all without her consent.

Join us for this important human story of modern medicine that explores race, class, poverty, family, friendship and ethics in research and scientific discovery.

Wed., February 24
6 – 8 p.m.
Health North, room 110
550 N. 3rd St.
ASU Downtown Phoenix
